

PROBLEM Solution

Project:
Manhole Re-lining

Owner:
Gladstone City Council

Installer:
Concure Australia

System:
EnviroLastic® AR 425

Area:
215 Sq. Ft.

Completed:
April, 1999

The attack of H_2SO_4 is a continuous problem to municipalities in their maintenance of sewage manholes and pumping stations.

EnviroLastic was introduced to the Gladstone City Council, who immediately decided to test it in three (3) severely attacked manholes. The fast cure, elastomeric properties, crack bridging and chemical resistance made EnviroLastic the perfect choice for this application.

The manholes were cleaned using high pressure water, primed and 2.0mm of EnviroLastic AR 425 applied.

The project was completed in two (2) days.
