

PROBLEM Solution

Project:
GANG SHOWER COATING
Hockey Arena
Edmonton, Alberta

Owner:
Knights of Columbus

GC:
Stuart Olson Constructors Inc.

Installer:
Desco Coatings of Alberta Ltd.
Edmonton, Alberta

System:
EnviroLastic®

Area:
340 Sq. Ft.

Completed:
July, 1996

The Knights of Columbus facilities cleaning staff were finding the existing ceramic tile finishes and grout joints difficult to keep clean. The existing tile was also quite dark and not very esthetically pleasing. The general contractor who had been renovating other areas of the facility was asked by the owners to look at other possible options for the shower areas. Desco Coatings was approached to provide a possible solution.

Desco Coatings put together a proposal that consisted of using the EnviroLastic System with a 100% solids epoxy top coat. After reviewing a number of EnviroLastic installations, the owners decided to proceed with the proposed system.

The installation consisted of Desco first washing the showers to remove the existing soap scum. The entire shower room was then sanded and the grout joints were repaired. A nominal 50 mils of EnviroLastic was applied to the floor, walls and ceiling with a top coat of white 100% solids epoxy coating.

The EnviroLastic system has provided a shower that is seamless, waterproof, easily cleaned and bright.
