

PROBLEM Solution

Project:
Pioneer Plastics Corporation
Auburn, Maine

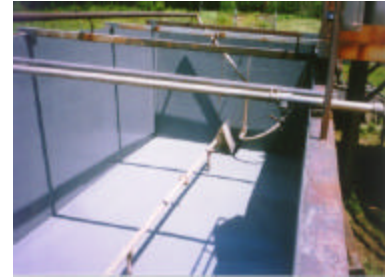

Owner:
Pioneer Plastics Corporation

Installer:
Jean's Waterproofing, Inc.
Auburn, ME

System:
EnviroLastic® AR 425

Area:
2,300 square feet

Completed:
July, 1998

Pioneer Plastics Corporation is one of the nation's leading producers of high quality laminates.

While working on an unrelated project at Pioneer Plastics, Jean's Waterproofing, Inc. (JW) was approached by Pioneer Plastic Project Engineer Anthony Reed, who was seeking a solution to the repairs of an existing, steel wastewater tank located outdoors.

JW examined the rectangular tank and suggested that a fast cure lining system would be the ideal solution.

JW provided Anthony Reed with literature, a video, and samples of EnviroLastic AR 425. It was decided to use the system following the removal of the existing deteriorated coating.

The tank was sandblasted, primed with an industrial wash primer and coated with 60 to 80 mils of EnviroLastic AR425.
