**Olathe, Kansas**

**System:**  
**EnviroLastic® AR 425**

**Area:**  
**1,990 Sq. Ft. Floors**  
**425 Sq. Ft. Walls**

**Completed:**  
**July, 1998**

Quaker Oats manufactures various food products such as grits, oatmeal, and cereals.

Quaker has a waste water system on their first, second and third floors. They were constantly having to repaint the floors in these areas.

EnviroLastic AR 425 was installed at fifty to sixty mils in lieu of the continual repainting. EnviroLastic AR 425 was selected because of the short down time required for installation, its crack bridging capabilities, and the fact that it can withstand the requirements of the areas, lasting much longer than paint.
