

PROBLEM *Solution*

Project:
FORCE DRAFT FAN #5
Brookhaven National Laboratory
Upton, NY

Owner:
U. S. Department of Energy

Installer:
Gombert Industries
New York

System:
EnviroLastic® AR 425

Area:
250 Sq. Ft.

Completed:
Summer, 1996

While on-site performing another EnviroLastic installation, Gombert Industries, Inc. was asked if they would coat some exterior metal.

The metal turned out to be Brookhaven National Laboratory's new Force Draft Fan. It seems that engineers wanted this exterior fan and concrete base to be coated with a product that would last longer than 12 to 24 months service of conventional coatings.

After preparing and cleaning all non-moving parts, a 20 mil coating of EnviroLastic AR 425 was applied followed with a pigmented top coat for aesthetics.

The fan not only looks good, but will be protected from the elements for years to come.
