

Project:
FLOORING UPGRADE AT
WATER TREATMENT FACILITY -
Brookhaven National Laboratory
Upton, NY

Owner:
U.S. Department of Energy

Installer:
Gombert Industries, Inc.

System:
EnviroLastic® AR 425 with
Slip Resistant Finish

Area:
1,800 Sq. Ft.

Completed:
Fall, 1996

A tough, flexible, and chemical resistant coating was needed to protect the new concrete at this water treatment facility. The coating was also to act as a membrane to contain any leaks that may damage the wells below.

Engineers at the lab specified EnviroLastic to coat all the concrete floor surfaces and pads. After shotblasting the floor and mechanically abrading all other surfaces to be coated, Gombert Industries, Inc. primed and installed 60 mils of EnviroLastic AR 425.

The end result was a complete monolithic flooring system which will give the facility years of protection.
